
10kHz Filter Option

The 10kHz filter is an option for the EX Vibscanner. All standard Vibscanners have this filter option. The following steps can be used to verify if this filter has been installed in a specific instrument.

Step 1.	Go to the “Vibscanner Setup”
Step 2.	Select “Device Info”
Step 3.	Scroll Down to “Runtime HWS”
Step 4.	If the listed number has the suffix “/A1” then the 10kHz low-pass filter is available for this specific instrument.
